Getting Started - Everything You Need to Know

A simple, friendly gym app that lives right in your web browser. No account, no install, nothing to download. Set up your exercises, run your workouts, and watch your progress grow.

Quick Start (60 seconds)

- 1 Open the app using the link you were sent.
- 2 Settings tab -> type your name -> tap Create (that is your profile).
- 3 Schedule tab -> tap + Add exercise -> fill it in -> Save.

A Few Things to Know

- Works on your phone or computer browser - just open the link.
- Data is saved only in your own browser, on your own device. Nothing is uploaded anywhere.
- Clearing your browser data resets the app - use Export in Settings to keep a backup.
- Four tabs at the bottom: Today / Schedule / Progress / Settings.

1

Create Your Profile

- 1 Tap the Settings tab (the gear icon at the bottom).
- 2 Under 'New profile name', type your name and tap Create.
- 3 Your profile is now active - you will see it in the top-right corner.

You can have more than one profile (e.g. for a friend or a different routine) and switch between them. Each profile keeps its own exercises and history.

2 Add Your Exercises

- 1 Schedule tab -> tap + Add exercise.
- 2 Fill in: Name (e.g. Push-ups), Sets (e.g. 3), Default reps (e.g. 10).
- 3 Default weight (optional) - leave blank for bodyweight, or enter a number (e.g. 20).
- 4 Each set has its own row starting from your defaults - change any individually.
- 5 Pick an icon emoji and the Day of the week, then tap Save.

When adding several exercises in a row, it keeps the same day selected - great for building out a full day quickly.

To edit or remove an exercise: Schedule tab -> tap Edit or Delete on any exercise card.

3 See Your Plan

- 1 Schedule tab - all exercises grouped by day of the week.
- 2 Today tab - just what is planned for today, with a Start workout button.

4 Do a Workout

- 1 Today tab -> tap Start workout (or Start next to any day on the Schedule tab).
- 2 Each exercise shows a row per set with reps and weight pre-filled from your plan.
- 3 Tap the circle on a set to mark it done (turns green).
- 4 Change reps or weight for any set - this only affects today, not your saved plan.
- 5 Tap + Add set for an extra set, or X to remove one (today only).
- 6 Rest timer: tap 60s / 90s / 120s for a countdown between sets (beeps when done).
- 7 When done, tap Finish. Your workout is saved to your history.

Need to stop partway? Tap Close - your progress is kept. The button changes to Resume workout, and it works even after closing the browser. To discard, tap Discard.

Your saved plan never changes from doing a workout - Push-ups 3 x 10 stays the same for next time even if you did 4 sets today.

5 Track Your Progress

- 1 Progress tab -> 'This week': workouts and sets completed.
- 2 By exercise: a chart for each. Mint bar = total reps, lavender bar = heaviest weight.
- 3 Watch the lavender bars rise as you lift heavier!
- 4 Tap any bar to see the full details of that workout.

6 Edit or Delete a Past Workout

- 1 Today tab -> find the workout under Recent workouts.
- 2 Tap Edit to reopen and change it (then tap Finish to save).
- 3 Tap Delete to remove it entirely from history.

7 Switch Profiles

- 1 Settings tab -> tap Use next to any profile to make it active.
- 2 Tap Create to add a new one. The top-right corner always shows who is active.

8 Light or Dark Mode

- 1 Tap the moon / sun button in the top-right corner to switch themes.
- 2 The little mascot turns into a sun or moon to match. Your choice is remembered.

9 Back Up Your Data

- 1 Settings tab -> Backup section.
- 2 Export this profile or Export all profiles - saves a file to your device.
- 3 Import - loads a backup file back in (new profiles are added; existing ones updated).

Important: your data lives only in your browser. Export regularly, especially before clearing your browser or moving to another device.

Quick FAQ

Do I need internet? Only to open the app the first time. After that it works offline in your browser.

Will my friend see my data? No - everyone's data stays on their own device.

I cleared my browser and lost everything! That is why the Export backup exists - keep a file somewhere safe.

Something looks wrong. Note what you did and what happened, and let the person who shared the app know.

Enjoy your training! Any questions, just reach out.
