

JUNE 2026

What's New

June 2026 Update - Last updated: 25 June 2026

This round is all about making the app feel like a real app - you can now install it to your phone's home screen, it works offline, and it has a new owl icon and name. There are also a few fun hidden surprises.

The previous testing guide (per-set planning, workout mode, progress charts, backups) is still available - those features are all still here. This guide covers what is new since then.

1 It's Now an Installable App (PWA)

You no longer just open it in a browser tab - you can install it like a normal app, and it keeps working without internet.

Install on iPhone / iPad:

- 1 Open the live link in Safari.
- 2 Go to the Settings tab -> tap 'Install app' for step-by-step help, or tap the Share button -> Add to Home Screen -> Add.
- 3 The owl icon appears on your home screen and opens full-screen with no address bar.

Install on Android / computer:

- 1 Open the live link in Chrome or Edge.
- 2 Go to Settings -> tap 'Install app' -> confirm the install dialog.

Works offline:

After opening the app once, it loads even with no signal. Try turning on Airplane Mode and reopening it - your data was always stored on your device, so it is all still there.

2 New Look and Name

- The app icon is now the owl, on a soft lavender background.
- When installed, it is named 'Justaino' on your home screen.

3

Hidden Surprises (Just for Fun)

Little easter eggs, just because. Not essential - feel free to skip, or go hunting!

Summon the owl: On a computer, type the word 'athena'. On a phone, press and hold the sun/moon mascot on the Today screen for about 1.5 seconds. An owl glides across with a cheeky message.

New personal record: Finish a workout where you beat a past weight for an exercise - confetti fires and a 'New personal record!' card appears.

Milestone trophy: Hit 7 completed workouts (and again at 30, 50, and 100) for a one-time celebration.

Secret credits: Tap the app title (top-left) 5 times quickly - a hidden card slides up.

4

Tidier Behind the Scenes

-

Deleting an exercise now also cleans up its old workout history, so nothing stale is left behind. The confirmation message tells you this - and a backup you exported earlier can always restore it.

-

Deleting a workout keeps your milestone trophies honest: if you drop below 7 workouts and climb back up, the trophy can celebrate again.

Found a bug or something confusing? Note what you did and what happened - that is the most useful feedback.
