

26 JUNE 2026

What's New

Accounts and Cloud Sync - 26 June 2026

The big one! The Justaino Gym App now has accounts, so your workouts sync across your devices and survive clearing your browser or switching phones. Thanks for testing!

The main change: you now log in to use the app. The very first time you log in, any workouts you already had on this device are saved to your account automatically - you won't lose anything.

1 New: Sign Up / Log In

When you open the app you'll see a **login screen**.

First time? Tap Sign up, enter your email and a password (at least 6 characters). You are logged straight in - no confirmation email to wait for.

Coming back? Enter the same email and password and tap Log in.

Log out: Anytime via Settings -> Log out (top of the page).

Try it: sign up with your email, then close the app and reopen it - you should still be logged in.

2 New: Your Workouts Sync Across Devices

Your data now lives in the **cloud** (not just this one browser), so:

- Log in on your phone and your laptop and you will see the same profiles, exercises, and history on both.
- Clear your browser, switch phones, or use a brand-new device - log in and everything is still there.

Try it: add an exercise on one device, then log in with the same account on another device or another browser - it should show up. Changes you make sync back the same way.

First-login note: the first time you log in on a device that already had workouts, you'll see a one-time message confirming your existing data has been saved to your account.

3 Works Offline (Mostly)

The app still works without a connection:

Viewing your plan and history: Works offline.

Doing a workout: Works offline - it saves and syncs up when you are back online.

Editing your plan: Adding, editing, or deleting profiles or exercises needs a connection. If you are offline you will get a friendly message instead of a confusing error. Just reconnect and try again.

4

New: Privacy and Data Controls

In **Settings -> Privacy and data** you will find:

-

A plain-English note on what is stored (your email and workout data) and where (Supabase, a trusted third-party cloud service). Only you can see your data. There is a 'Read the full privacy note' link too.

-

A 'Delete my data' button that permanently removes all your profiles, exercises, and history from the cloud and your device. Export a backup first if you want a copy (Settings -> Backup).

*

A Few Things to Know

Forgot your password? There is no self-serve password reset yet (it is coming). For now, keep your password somewhere safe - if you get locked out, just message the owner.

Want your account fully removed? 'Delete my data' clears your workouts. To delete the login itself, message the owner and it will be removed.

First load might be slow: The free cloud database naps after about a week of no use and takes a few seconds to wake up. Give it a moment.

Backups still work: Exactly as before via Settings -> Backup, if you like keeping your own copy.

Found something off? Note what you did and what happened - that is the most useful feedback.
